

Abstract

[0019] The invention is directed to a device for fastening door handles (3). A pocket hole (4) is provided at every door handle (3) for receiving a pin (8) which can be locked with each door handle (3). According to the invention, the oppositely located door handles (3) of a fitting are identically constructed, and a plurality of drill holes (13) are arranged at one of the two end portions (7) of the pin (8) so as to be offset in circumferential direction and relative to the longitudinal axis (12) of the pin (8) for the engagement of a threaded screw (15).
